

Project Design Phase

Proposed Solution

Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites (2019)

Project Title	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites (2019)
Domain	Culture & Heritage Analytics / Tourism & Conservation Business Intelligence
Tool	Tableau Desktop / Tableau Public
Dataset	Kaggle UNESCO World Heritage Sites Dataset, 1978–2019 (~1,121 sites, 12 fields)
Prepared By	M. Deepika (Team Lead), M. Supraja, K. Srikala, I. Pushpa, U. Bhavana
Mentor	Not yet assigned

3.2 Proposed Solution

Field	Description
Problem Statement	Heritage conservation officers, tourism planners, and policy researchers lack a unified, interactive analytics tool to explore UNESCO World Heritage Site data by category, region, danger status, and inscription year. This leads to slow conservation funding prioritisation, imbalanced tourism planning, and limited ability to communicate long-term heritage trends.
Idea / Solution Description	An interactive Tableau-based BI dashboard that transforms the Kaggle UNESCO World Heritage Sites dataset (~1,121 sites, 12 fields, 1978–2019) into category, regional, and trend-focused visualizations combined into three role-specific dashboards and a Tableau Story, published on Tableau Public for free browser access.
Novelty / Uniqueness	Role-specific dashboards tailored to three distinct stakeholder functions (conservation, tourism planning, policy research) rather than a single generic view. The inscription trend chart adds an analytical layer connecting historical patterns directly to present-day danger listings, which is not visible in a standard UNESCO reference table.
Social / Business Impact	Conservation officers gain data-driven funding prioritisation, tourism planners gain balanced category/region visibility for itinerary design, and policy researchers gain a clear long-term view of heritage recognition and risk trends — all through a single, freely accessible Tableau Public workbook.
Business Model	This is a team academic/analytics project delivered as a public Tableau dashboard. Future potential includes a recurring dashboard for heritage NGOs or tourism boards, or a packaged analytics offering for conservation funding bodies.
Scalability	The solution is scalable — new inscription years and Danger List updates can be appended to the source data and the workbook refreshed. Additional dimensions (e.g., inscription criteria, area in hectares) can be added as new filters or calculated fields without redesigning the dashboard architecture.
